Assignment 9.1: Convert a Desktop Page into a Mobile-First Layout

Goal: make the Week 8 dashboard or photo gallery responsive using a mobile-first approach.

1. Verify the viewport meta tag

Place this inside the HTML <head>:

```
<meta name="viewport" content="width=device-width, initial-scale=1">
```

2. Write mobile-first CSS

Base styles target phones and use no media query.

```
*, *::before, *::after { box-sizing: border-box; }
body { margin: 0; font-family: system-ui, sans-serif; }
img { max-width: 100%; height: auto; display: block; }

.container { padding: 1rem; max-width: 1200px; margin: 0 auto; }

.gallery {
  display: grid;
  grid-template-columns: 1fr;   /* 1 column on mobile */
  gap: 1rem;
}
.gallery img {
  width: 100%; aspect-ratio: 4 / 3;
  object-fit: cover; border-radius: 8px;
}

nav ul { display: flex; flex-direction: column;
         gap: .5rem; padding: 0; list-style: none; }
```

3. Add breakpoints (at least 2) with media queries

Use min-width so styles build up from mobile to larger screens.

```
/* Tablet */
@media (min-width: 768px) {
  .container { padding: 1.5rem; }
  .gallery { grid-template-columns: repeat(2, 1fr); }
  nav ul { flex-direction: row; }
}

/* Desktop */
@media (min-width: 1024px) {
  .gallery { grid-template-columns: repeat(3, 1fr); gap: 1.5rem; }
}
```

Dashboard variant: stack cards in one column on mobile, two columns on tablet, and on desktop use a sidebar plus card grid (grid-template-columns: 240px 1fr).

4. Fix horizontal overflow and overlapping elements

- Replace fixed widths (e.g. width: 800px) with max-width: 100% or percentages.
- Wrap wide tables in a container with overflow-x: auto.
- Use flex-wrap: wrap on flex rows.
- Add min-width: 0 to grid or flex children that contain long text.
- To find the culprit, run in the DevTools console:
  `[...document.querySelectorAll('*')].filter(e => e.scrollWidth > document.documentElement.clientWidth)`

5. Test with Chrome DevTools Device Mode

- Open DevTools (F12), then toggle Device Mode (Ctrl+Shift+M).
- Test three sizes: mobile (~375px, iPhone SE), tablet (768px, iPad), desktop (1280px or wider).
- Use the three-dot menu in Device Mode and choose Capture screenshot or Capture full size screenshot.
- Drag the viewport edge slowly across the breakpoints and check for horizontal scrollbars or overlaps.

Submission checklist

- Updated HTML file(s)
- Updated CSS file(s)
- Screenshot: mobile
- Screenshot: tablet
- Screenshot: desktop
